About World Scientific Publishing

World Scientific Publishing is a leading independent publisher of books and journals for the scholarly, research, professional and educational communities. The company publishes about 600 books annually and about 130 journals in various fields. World Scientific collaborates with prestigious organisations like the Nobel Foundation, US National Academies Press, amongst others, to bring high quality academic and professional content to researchers and academics worldwide. To find out more about World Scientific, please visit www.worldscientific.com

How to Order

Please complete the order form on page 19 of this catalogue and return it to a World Scientific office nearest to you. Alternatively, you may wish to contact our representatives.

You can also order online at www.worldscientific.com or from your regular bookseller.

Textbook Inspection Copies

These are available upon request to lecturers for textbook adoption purposes. Please email us at sales@wspc.com or visit our website at www.worldscientific.com/page/inspection-copy

Interested in Writing a Book?

We would be delighted to hear from you if you are considering writing a book. Please contact any of our worldwide offices or email us at editor@worldscientific.com for more information. Alternatively, you can visit our website at www.worldscientific.com

Other Catalogues

We have produced these catalogues for the year 2017. Please email us at mkt@wspc.com to request for any of them.

Applications and Analysis

SIMULATION-DRIVEN AERODYNAMIC DESIGN USING VARIABLE-FIDELITY MODELS

by **Leifur Leifsson & Slawomir Koziel**
(Reykjavik University, Iceland)

This book explores the alternative: performing computationally efficient design using surrogate-based optimization, where the high-fidelity model is replaced by its computationally cheap but still reasonably accurate representation: a surrogate. The emphasis is on physics-based surrogates. Application-wise, the focus is on aerodynamics and the methods and techniques described in the book are demonstrated using aerodynamic shape optimization cases. Applications in other engineering fields are also demonstrated.

Readership: Graduate students and researchers in the field of engineering, in particular, aerospace engineering.

GALLIUM NITRIDE AND SILICON CARBIDE POWER DEVICES

by **B Jayant Baliga** (North Carolina State University, USA)

This comprehensive book discusses the physics of operation and design of gallium nitride and silicon carbide power devices. It can be used as a reference by practicing engineers in the power electronics industry and as a textbook for a power device or power electronics course in universities.

Readership: Researchers, academics, and graduate students in electrical & electronic engineering, semiconductors, materials engineering and energy research.

600pp	Dec 2016

SHIFT REGISTER SEQUENCES

Secure and Limited-Access Code Generators, Efficiency Code Generators, Prescribed Property Generators, Mathematical Models
by **Solomon W Golomb**
(University of Southern California, USA)

This book is the third, revised edition of the original definitive book on shift register sequences which was published in 1967, which has been widely distributed, read, and cited. It has stood the test of time, and provides a clear, comprehensive, and readily applicable description of both linear and non-linear shift register sequences.

Readership: Graduate students and researchers working on communications, radar signal design, pseudorandom number generator, digital wireless telephony, and many other areas which require understanding of shift register sequences.

Selected Topics in Electronics and Systems - Vol 56

FUNDAMENTAL & APPLIED PROBLEMS OF TERAHERTZ DEVICES AND TECHNOLOGIES

Selected Papers from the Russia – Japan – USA Symposium (RJUS TeraTech-2014)
edited by **Michael Shur**
(Rensselaer Polytechnic Institute, USA)

This book, covering issues ranging from basic Thz-related phenomena to applications in sensing, imaging, and communications, contains some ground-breaking works in the industry, and will be a useful reference for device and electronics engineers and scientists.

Readership: Scientists, engineers and researchers interested in terahertz materials, devices, systems and applications, as well as graduate students working on terahertz science and technology.

104pp	Oct 2015	
978-981-4725-19-4	US\$120	£86
978-981-4725-20-0(ebook)	US\$156	£112

ELEMENTS OF HUMAN VOICE

by **C Julian Chen** (Columbia University, USA)

Key Features:

- This is a unique book about a new theory and new mathematical models of human voice, and its applications in speech and voice technology
- There are no competing books
- The vitality of the new science and new technology is evidenced by five (5) issued US patents
- Another unique feature of that book is: all figures are new and are specially designed for the book

Readership: Graduate students, academics and professionals in the field of computer science especially voice interface, physiology and medicine especially otolaryngology, linguistics especially phonetics, and vocal music.

220pp	Jul 2016	
978-981-4733-89-2	US\$114	£82

Biomedical Engineering

NMR PROBEHEADS FOR BIOPHYSICAL AND BIOMEDICAL EXPERIMENTS (2nd Edition)

Theoretical Principles and Practical Guidelines

by **Joël Mispelter** (*INSERM, France & Curie Institute, France*), **Mihaela Lupu** (*Curie Institute, France*) & **André Briguët** (*University Claude Bernard Lyon 1, France*)

2nd Edition

This new edition has been revised and updated to include a chapter dedicated to RF components, which are commonly used for probes realization and their frequency-dependent characteristics. Another completely revised chapter concerns the multiple coil systems and discusses arrays coils, different decoupling methods, and some principles for interfacing coils with low-noise preamplifiers. The principles of linear circuit analysis are presented in a dedicated chapter. Last but not least, accompanying files containing updated software for probe design have been made available from the publisher's website.

Readership: Bioengineers, biomedical researchers and non-experts in RF technology willing to acquire basic knowledge on RF sensors design; inquisitive user of an NMR spectrometer could be interested in some "knowing-how" about this "black box".

Series on Bioengineering and Biomedical Engineering - Vol 8

DYNAMICS OF THE VASCULAR SYSTEM: INTERACTION OF THE HEART (2nd Edition)

2nd Edition

by **John K-J Li** (*Rutgers University, USA*)

This current and self-contained second edition updates many of the new findings since its first edition a decade ago. It also includes a new chapter on the "Interaction with the Heart". The dynamics of the arterial system, the venous system, the microcirculation and their interaction with the heart are quantitatively described in terms of their structures and functions. Clinical measurements, applications to the cardiovascular field and physiological mechanisms are clearly identified throughout the text. Most importantly, worked examples are provided, such that the readers can appreciate the application aspects of the underlying formulation.

Readership: Researchers, academics, professionals, undergraduate and graduate students in bioengineering, electrical & mechanical engineering, cardiology and biophysics.

World Scientific Series in Nanoscience and Nanotechnology - Vol 11

MOLECULAR BIOELECTRONICS The 19 Years of Progress (2nd Edition)by **Nicolini Claudio** (*University of Genoa, Italy*)

2nd Edition

Molecular bioelectronics is a field in strong evolution at the frontier of life and materials sciences. The term is utilized in a broad context to emphasize a unique blend of electronics and biotechnology which is seen as the best way to achieve many objectives of industrial and scientific relevance, including biomolecular engineering, bioelectronic devices, materials and sensors capable of optimal hardware efficiency and intelligence and molecular miniaturization.

Readership: Students and scientists in bioelectronics and materials science.

Circuits and Systems

FLEXIBLE ELECTRONICS

From Materials to Devices

edited by **Guozhen Shen** (*Chinese Academy of Sciences, China*) & **Zhiyong Fan** (*The Hong Kong University of Science and Technology, Hong Kong*)

This book provides a comprehensive overview of the recent development of flexible electronics. This is a fast evolving research field and tremendous progress has been made in the past decade. In this book, new material development and novel flexible device, circuit design, fabrication and characterizations will be introduced. Particularly, recent progress of nanomaterials, including carbon nanotubes, graphene, semiconductor nanowires, nanofibers, for flexible electronic applications, assembly of nanomaterials for large scale device and circuitry, flexible energy devices, such as solar cells and batteries, etc, will be introduced. And through reviewing these cutting edge research, the readers will be able to see the key advantages and challenges of flexible electronics both from material and device perspectives, as well as identify future directions of the field.

Readership: Academics, researcher and graduate students in electrical & electronic engineering, microelectronics and nanomaterials & nanostructures.

Advanced Series in Electrical and Computer Engineering - Vol 16

INTRODUCTION TO ELECTRONIC CIRCUITS

A Design-Oriented Approach

by **Jose Silva-Martinez** (*Texas A & M University, USA*) & **Marvin Onabajo** (*Northeastern University, USA*)

This book provides a compact and practical presentation of microelectronics circuits for a one-semester introductory course. Contrary to textbooks that are written for comprehensive two-semester electronics courses, the focus of this book is on the basic concepts and immediate discussion of application examples to instill more interest. The theoretical concepts are introduced by explaining the methods to analyze elementary electronic circuits with design considerations, design procedures, and simulation examples.

Readership: Researchers, academics, professionals, graduate and undergraduate students in electrical & electronic engineering and computer engineering.

SEMICONDUCTOR GLOSSARY

A Resource for Semiconductor Community (2nd Edition)

by **Jerzy Ruzyllo** (*Penn State University, USA*)

2nd Edition

With over 2,000 terms in the area of semiconductor science and engineering are defined and explained. It is a second edition of *Semiconductor Glossary* replacing the first edition published 2004 with some 600 new terms defined including many which were only recently introduced to the semiconductor terminology.

Readership: Undergraduate, graduate student, practitioners, academia in electrical & electronic engineering, materials engineering, semiconductors and related areas, as well as innovation/technology.

ICP Primers in Electronics and
Computer Science - Vol 1

DIGITAL ELECTRONICS: A PRIME Introductory Logic Circuit Design by **Mark Nixon** (*University of Southampton, UK*)

This practical introduction explains exactly how digital circuits are designed, from the basic circuit to the advanced system. It covers combinational logic circuits, which collect logic signals, to sequential logic circuits, which embody time and memory to progress through sequences of states. The primer also highlights digital arithmetic and the integrated circuits that implement the logic functions.

Readership: First year BEng and MEng students (Electrical Engineering), undergraduate Computer Science & Electronics students, Physics students taking Electronics modules.

Advanced Series in Electrical and
Computer Engineering - Vol 16

DESIGN TECHNIQUES FOR INTEGRATED CMOS CLASS-D AUDIO AMPLIFIERS by **Adrian I Colli-Menchi, Miguel A Rojas-Gonzalez & Edgar Sanchez-Sinencio** (*Texas A&M University, USA*)

The first part of the book introduces the motivation and fundamentals of audio amplification. The loudspeaker's operation and main audio performance metrics explains the limitations in the amplification process. The second part of this book presents the operating principle and design procedure of the class-D amplifier main architectures to provide the performance tradeoffs. The circuit design procedures involved in each block of the class-D amplifier architecture are highlighted. The third part of this book discusses several important design examples introducing state-of-the-art architectures and circuit design techniques to improve the audio performance, power consumption, and efficiency of standard class-D audio amplifiers.

Readership: Researchers, academics, professionals, graduate and undergraduate students in electrical & electronic engineering, computer engineering and systems engineering.

COMPUTER AIDED DESIGN OF MICRO- AND NANO-ELECTRONIC DEVICES

by **Chinmay Kumar Maiti**
(*Siksha 'O' Anusandhan University, India*)

Micro and nanoelectronic devices are the prime movers for electronics, which is essential for the current information age. This unique monograph identifies the key stages of advanced device design and integration in semiconductor manufacturing. It brings into one resource a comprehensive device design using simulation. The book presents state-of-the-art semiconductor device design using the latest TCAD tools.

Readership: Professionals, researchers, academics, and graduate students in electrical & electronic engineering and microelectronics.

350pp	Oct 2016	
978-981-4713-07-8	US\$162	£117

PHOTONICS IN SPACE

Advanced Photonic Devices and Systems
by **Caterina Ciminelli, Mario Nicola Armenise & Francesco Dell'Olio** (*Politecnico di Bari, Italy*)

The book focuses on photonic devices and systems for space applications and critically reviews the most promising research advances in the field of photonic technologies, which may have a significant impact on the performance of space systems.

Readership: Graduate students, researchers and professionals in the field of aerospace engineering, electrical & electronic engineering, nanophotonics and optics.

300pp	Jul 2016	
978-981-4725-10-1	US\$118	£85
978-981-4725-11-8(ebook)	US\$153	£111

Series on Emerging Technologies in
Circuits and Systems

ADVANCES IN 3D INTEGRATED CIRCUITS AND SYSTEMS by **Hao Yu & Chuan-Seng Tan** (*NTU, Singapore*)

This book that presents a comprehensive overview on the subject of 3D integrated circuits focusing on the design of circuits and systems. It covers multiple topics about 3D integrated circuits, starting from fabrication, to modeling; then moving to system level power, thermal and I/O management techniques; and finally, the design examples of emerging technologies

Readership: Advanced undergraduates, graduate students, researchers and professionals dealing with 3D Integrated Circuits and Systems.

392pp	Oct 2015	
978-981-4699-00-6	US\$138	£99

THEORY OF SEMICONDUCTOR QUANTUM DOTS

Band Structure, Optical Properties and
Applications
edited by **Aleksey Andreev**
(*Hitachi Cambridge Laboratory, UK*)

The first book on the market that provides a detailed theory of the basic properties of quantum dots. Provides a unique collection of data on quantum dots not available elsewhere. Gives step-by-step instructions on how to calculate the main properties of realistic quantum dots made from a wide range of materials

Readership: Researchers in the area of semiconductor dots and nanocrystals, including fundamental research and applications, experiment and theory, and students and researchers in physics and electrical engineering, including biological and medical application areas. Some chapters are suitable for postgraduate courses.

400pp	Feb 2017

Lessons from Nanoscience: A Lecture Notes Series

ESSENTIAL PHYSICS OF NANOSCALE TRANSISTORSby **Mark Lundstrom** (*Purdue University, USA*)**Key Features:**

- The lectures take a unique approach that is physically insightful, mathematically simple, and that works for nano-devices as well as for micro and macro devices
- The lectures are designed to be broadly accessible to anyone with an undergraduate degree in the physical sciences or engineering
- The lectures are complemented by an extensive set of on-line resources

Readership: Any student and professional with an undergraduate degree in the physical sciences or engineering.

300pp	Jan 2017	
978-981-4571-72-2	US\$85	£56

**Communications and Signal Processing****INTRODUCTION TO SIGNAL PROCESSING, INSTRUMENTATION, AND CONTROL**

An Integrative Approach
by **Joseph Bentsman** (*University of Illinois at Urbana-Champaign, USA*)

The material is presented in a visually rich, mathematically and graphically well supported, but not analytically overburdened format. By incorporating software testbed into homework and project assignments, the book fully brings out the excitement of going through the adventure of exploring and solving a mold oscillator distortion problem, while covering the key signal processing, diagnostics, instrumentation, modeling, control, and system integration concepts.

Readership: Researchers, academics, professionals, undergraduate and graduate students in signal processing.

772pp	Apr 2016	
978-981-4733-12-0	US\$145	£96

ELECTRICAL AND GEOMETRICAL PROPERTIES OF ORGANIC MONOLAYERS

by **Mitsumasa Iwamoto** (*Tokyo Institute of Technology, Japan*),
Tetsuya Yamamoto (*Tokyo Institute of Technology, Japan*) &
Zhong-Can Ou-Yang (*Chinese Academy of Science, China*)

This book addresses the physical mechanisms involved in the characteristic electrical properties and the geometrical structures that are observed from dipolar monolayers composed of organic molecules by using dielectric physics, electrostatics, the physics of liquid crystal, and soft matter physics.

Readership: This book would be useful for physicists, chemists and electronic engineers of the field to understand their experimental results and to develop new theories.

World Scientific Series in Applications of Superconductivity and Related Phenomena - Vol 1

RESEARCH, FABRICATION AND APPLICATIONS OF BI-2223 HTS WIRES

edited by **Kenichi Sato**
(*Sumitomo Electric Industries Ltd, Japan*)

The purpose of this book is to cover all aspects of Bi-2223 superconducting wires from fundamental research, fabrication process to applications. This book contains many chapters written by distinguished experts in the world.

Readership: This book is suitable for students, researchers and industry experts who are interested in research, fabrication and application of Bi-2223 HTS superconducting wires.

508pp	Apr 2016	
978-981-4749-25-1	US\$186	£134
978-981-4749-26-8(ebook)	US\$242	£174

Advanced Series in Electrical and Computer Engineering

2nd Edition**ACTIVE NETWORK ANALYSIS**

Feedback Amplifier Theory (**2nd Edition**)

by **Wai-Kai Chen** (*University of Illinois, Chicago, USA*)

This 2nd edition provides an in-depth, up-to-date, unified, and comprehensive treatment of the fundamentals of the theory of active networks and its applications to feedback amplifier design. The main purpose is to discuss the topics that are of fundamental importance that transcends the advent of new devices and design tools. Intended primarily as a text in circuit theory in electrical engineering for senior and/or first year graduate students, the book also serve as a reference for researchers and practicing engineers in industry.

Readership: Researchers, academics, graduate and undergraduate students in electrical & electronic engineering, computer engineering, communications & systems engineering.

800pp	Oct 2016	
978-981-4675-88-8	US\$226	£163

Advanced Series on Ocean Engineering

SATELLITE SAR DETECTION OF SUB-MESOSCALE OCEAN DYNAMIC PROCESSES

by **Quanan Zheng** (*University of Maryland, College Park, USA*)

Key Features:

- Differing from general ocean remote sensing books, this book focuses on one subject only, i.e., SAR detection of the ocean. Thus it is more specified and more concentrated.

The fundamental material for the book is the research results obtained by the author during the last two decades and also includes the contributions from other investigators

Readership: Graduate, academics and professionals in the field of satellite oceanography, ocean engineering, geophysics, electrical and electronic engineering, and earth science.

300pp	Dec 2016	
978-981-4749-00-8	US\$132	£95

Advanced Series in Electrical and
Computer Engineering - Vol 18

BROADBAND MATCHING

Theory and Implementations (3rd Edition)
by **Wai-Kai Chen** (University of Illinois at Chicago, USA)

3rd
Edition

The third edition presents a unified, up-to-date and detailed account of broadband matching theory and its applications to the design of broadband matching networks and amplifiers. A special feature is the addition of results that are of direct practical value. They are design curves, tables and explicit formulas for designing networks having Butterworth, Chebyshev or elliptic, Bessel or maximally flat group-delay response. These results are extremely useful as the design procedures can be reduced to simple arithmetic. Two case studies towards the end of the book are intended to demonstrate the applications to the practical design of modern filter circuits.

Readership: Students in Electrical and Electronics Engineering, Network Engineering, Broadband Engineering.

880pp	Dec 2015	
978-981-4619-06-6	US\$128	£84
978-981-4619-07-3(ebook)	US\$166	£109

ADVANCED SIGNAL PROCESSING ON BRAIN EVENT-RELATED POTENTIALS

Filtering ERPs in Time, Frequency and Space
Domains Sequentially and Simultaneously
by **Fengyu Cong** (Dalian University of Technology,
China), **Tapani Ristaniemi** (University of Jyväskylä,
Finland) & **Heikki Lyytinen** (University of
Jyväskylä, Finland)

Key Features:

- Advanced signal processing approaches can be applied on averaged EEG to extract ERPs' components
- Filtering ERPs in time, frequency and space domains sequentially and simultaneously
- Demo of ERP data and MATLAB codes are open-access for the advanced signal processing approaches on ERPs

Readership: Undergraduate, graduate, researchers and professionals in the field of neurology/neuroscience, medical imaging, psychology, biomedical engineering and computer science.

224pp	Jun 2015	
978-981-4623-08-7	US\$110	£79

Communications and Signal Processing - Vol 5

BEAMFORMING

Sensor Signal Processing for Defence
Applications

edited by **Athanassios Manikas**
(Imperial College London, UK)

Key Features:

- Unique treatment of beamforming
- Unique modelling techniques using array processing of modern radar systems such as MIMO, SAR, etc.
- New material related to the research carried out at UDRC. This book is considered as one of the academic outcomes of the UDRC in Signal Processing

Readership: Postgraduate students and researchers working in the area of signal processing as well researchers working in the defence industry. The UDRC runs a series of short courses in signal processing for PhD students and industrial researchers and this book is recommended reading.

312pp	May 2015	
978-1-78326-274-8	US\$119	£86
978-1-78326-275-5(ebook)	US\$155	£112

FOUNDATIONS FOR RADIO FREQUENCY ENGINEERING

by **Geyi Wen** (Nanjing University of
Information Science & Technology, China)

The book provides a comprehensive coverage of the fundamental topics in microwave engineering, antennas and wave propagation, and electromagnetic compatibility, including electromagnetic boundary value problems, waveguide theory, microwave resonators, antennas and wave propagation, microwave circuits, principles of electromagnetic compatibility designs, information theory and systems.

Readership: Academics, researchers, postgraduates and undergraduates in electrical & electronic engineering and applied physics.

Computer Engineering

COMPUTER ARITHMETIC: VOLUME I, II, III

edited by **Earl E Swartzlander** (University of Texas at Austin,
USA) & **Carl E Lemonds** (Qualcomm, Austin, USA)

Volume I provides many of the basic papers in computer arithmetic. These papers describe the concepts and basic operations (in the words of the original developers) that would be useful to the designers of computers and embedded systems. Although the main focus is on the basic operations of addition, multiplication and division, advanced concepts such as logarithmic arithmetic and the calculations of elementary functions are also covered.

Volume II contains many classic papers treating advanced concepts in computer arithmetic, which is very suitable as stand-alone textbooks or complementary materials to textbooks on computer arithmetic for graduate students and research professionals interested in the field.

Volume III is a compilation of key papers in computer arithmetic on floating-point arithmetic and design. The intent is to show progress, evolution, and novelty in the area of floating-point arithmetic. This field has made extraordinary progress since the initial software routines on mainframe computers have evolved into hardware implementations in processors spanning a wide range of performance.

Readership: Graduate students and research professionals interested in computer arithmetic.

THE KISH CYPHER

The Story of KLJN for Unconditional Security

by **Laszlo B Kish** (Texas A&M University, USA)

Designed to offer a thorough account of the KLJN key exchange system (also known as the Kish Cypher, the Kish Key Distribution, etc.) and its unconditional security, this book explains the scheme's foundation in classical statistical physics and its superiority to its quantum-based competitors for particular applications.

This book clarifies the misinformation behind heated debates on the "Kish Cypher" (the popular but incorrect name for the Kirchhoff–Law–Johnson–Noise, KLJN, scheme), and debunks common misconceptions by using simple and clear-cut treatments to explain the protocol's working principle — an understanding that has eluded (even) several experts of computer science, quantum security, and electrical engineering. The work also explains how the scheme can provide the same (or higher) level of security as quantum communicators at a thousandth of the cost.

Readership: Scientists, engineers, members of the general public interested in how things work and all who are interested in today's history of secure communication, science and technology.

Series in Electrical and Computer Engineering - Vol 4

2nd Edition

A MATHEMATICAL INTRODUCTION TO CONTROL THEORY (2nd Edition)

by **Shlomo Engelberg** (Jerusalem College of Technology, Israel)

This invaluable book makes effective use of MATLAB® as a tool in design and analysis. Containing 75 solved problems and 200 figures, this edition will be useful for junior and senior level university students in engineering who have a good knowledge of complex variables and linear algebra.

Readership: Researchers, academics, professionals, undergraduate and graduate students in electrical & electronic engineering, computer engineering, mechanical engineering & chemical engineering.

Electromagnetism

RESEARCH MAGNET TECHNOLOGY

Forty Years of Creating High Magnetic Fields
edited by **Harry Jones** (Oxford)

Research Magnet Technology presents an overview of the technologies necessary to provide high magnetic fields as a research tool mainly, but by no means exclusively, for condensed matter physics. Taken from the perspective of the author's career spanning four decades, it contains a historical component while at the same time deals with state-of-the-art and future developments.

Readership: Magnet technologists, engineers, physicists (especially in condensed matter physics), science historians and informed generalists.

TRANSFORMING RECONFIGURABLE SYSTEMS

A Festschrift Celebrating the 60th Birthday of Professor Peter Cheung
edited by **Wayne Luk & George A Constantinides** (Imperial College London, UK)

Focuses on reconfigurable systems, an area where Professor Peter Cheung has contributed much to its progress.

Readership: Graduates and researchers in the fields of programming and computer engineering.

284pp	Apr 2015

Control Engineering

ADAPTIVE CONTROL OF UNDERACTUATED MECHANICAL SYSTEMS

by **An-Chyau Huang, Yung-Feng Chen & Chen-Yu Kai** (National Taiwan University of Science and Technology, Taiwan)

In this book, we collected recent results on the control of underactuated mechanical systems subject to internal uncertainties and external disturbances. The strategy developed is so universal that it is not restricted to a specific system but a large class of underactuated systems. Several benchmark systems are studied in this book, including detailed literature review, system dynamics derivation, control problem formulation, and simulation verification.

Readership: Graduate students, researchers, and academics in control engineering, mechanical engineering, electrical & electronic engineering, and optimization and control theory.

MAGNETO THERMOELECTRIC POWER IN HEAVILY DOPED QUANTIZED STRUCTURES

by **Kamakhya Prasad Ghatak**
Institute of Engineering and Management, India

This pioneering monograph solely deals with the *Magneto Thermoelectric Power (MTP) in Heavily Doped (HD) Quantized Structures*. The materials considered range from HD quantum confined nonlinear optical materials to HgTe/CdTe HD superlattices with graded interfaces and HD effective mass superlattices under magnetic quantization.

Readership: Graduate students, researchers and academics interested in advanced solid state physics and nanoelectronics.

Electronics and Thermal Packaging

WSPC Series in Advanced Integration and Packaging

CO-DESIGN AND MODELLING FOR ADVANCED INTEGRATION AND PACKAGING

Manufacturing and Reliability

by **Christopher Bailey**, **Stoyan Stoyanov** & **Hua Lu** (University of Greenwich, UK)

Key Features:

- Multi-domain modeling for advanced packaging and manufacturing technologies. Demonstration of how modeling manufacturing/assembly processes can be used to inform subsequent modeling/design analysis for reliability
- Written by world leading experts in multi-physics/domain modeling, who have worked for many years in this field both on government funded research projects and consultancy projects with industry
- Design and modelling challenges and solutions for implementing advanced packaging and integration technologies in high reliability applications

Readership: Graduate students, researchers professionals, and electrical and mechanical engineers in advanced packaging of micro and power electronic systems, design and modelling community.

EMBEDDED DIELECTRICS FOR ELECTRONIC PACKAGING

by **Shuhui Yu** (Shenzhen Institutes of Advanced Technology, China & Chinese Academy of Sciences, China), **Rong Sun** (Shenzhen Institutes of Advanced Technology, China & Chinese Academy of Sciences, China) & **Ching-Ping Wong** (The Chinese University of Hong Kong, Hong Kong & Georgia Institute of Technology, USA)

Key Features:

- One of the authors of this book is Prof. Ching Ping WONG, a world-renowned scholar in electronic engineering and a member of the US National Academy of Engineering
- This book for the first time introduces the design of the synthesizing methods of ceramic-metal hybrid particles used as dielectric filler in the polymer matrix
- Focuses on the dielectric composites for embedded capacitor applications, instead of covering broad contents

Readership: Graduate students and researchers in electronic packaging, engineers dealing with reliability of microelectronics and computer systems, as well as short courses given at microelectronics / computer manufacturing companies and conferences.

INNOVATIVE THERMOELECTRIC MATERIALS

Polymer, Nanostructure and Composite Thermoelectrics

edited by **Howard E Katz** &

Theodore O Poehler

(Johns Hopkins University, USA)

Key Features:

- Presents a highly authoritative picture of the field with contemporary information by prominent contributors to the field
- First book that highlights the potential of polymers in thermoelectrics
- Substantial theoretical analysis included to justify the experimental approaches reported and proposed at a level of detail that is both comprehensive and accessible

Readership: Researchers and post-graduate students in the field of thermoelectrics.

Robotics

ROBOT HANDS AND MULTI-FINGERED HAPTIC INTERFACES

Fundamentals and Applications

by **Haruhisa Kawasaki** (Gifu University, Japan)

Key Features:

- Most available books only focus on "robot" and "robot control" for robot arms. This book treats multi-fingered robot hands
- Multi-fingered haptic interface: this is a novel research area in robot hand application and there is no book on multi-fingered haptic interfaces
- Teleoperation for multi-fingered robot hands will be realized by using multi-fingered haptic interfaces

Readership: Academic and Professional, Researchers, Graduate and Post-Graduate Engineering students specializing in robotics.

ENCYCLOPEDIA OF TWO-PHASE HEAT TRANSFER AND FLOW I

Fundamentals and Methods (A 4-Volume Set)

edited by **John R Thome**

(Laboratory of Heat and Mass Transfer (LTCM), Switzerland &
Ecole Polytechnique Fédérale de Lausanne (EPFL), Switzerland)

ENCYCLOPEDIA OF TWO-PHASE HEAT TRANSFER AND FLOW II

Special Topics and Applications (A 4-Volume Set)

edited by **John R Thome** (Laboratory of Heat and Mass Transfer (LTCM), Switzerland & Ecole Polytechnique Fédérale de Lausanne (EPFL), Switzerland) & **Jungho Kim** (University of Maryland, USA)

New 2600-page reference edited by Prof. John Thome, one of the world's leading experts on two-phase heat transfer and its numerous applications.

Pub. Date: Oct 2015

978-981-4623-20-9 (Set I, 1,112pp) US\$1,350 £891
978-981-4623-21-6 (Set I, ebook) US\$1,755 £1,158

Pub. Date: Oct 2015

978-981-4623-27-8 (Set II, 1,324pp) US\$1,350 £891
978-981-4623-28-5 (Set II, ebook) US\$1,755 £1,158

Notable aspects of all these volumes include: comprehensive coverage of the fundamentals, experimental results and measurement/test techniques, empirical and mechanistic models, a pragmatic numerical model for microchannel evaporation and condensation, high level numerical modeling of two-phase flows and heat transfer, simulator codes for micro-two-phase cooling systems, and numerous other special topics. No effort has been made to "homogenize" the content of chapters on overlapping topics, such that the reader can gain the insights of all the experts and see their different approaches and solutions to important problems.

Readership: Graduate students, researchers and professional in the fields of mechanical, refrigeration, chemical, nuclear and electronics engineering on the important topics of two-phase heat transfer and two-phase flow.

Key Features:

- The twin-set offers an all-in-one reference for two-phase heat transfer and flows
- The twin-set provides a comprehensive treatment of the subject with contributions from 55 top researchers and experts
- The twin-set is relevant to researchers and engineers working on all types of heat transfer and cooling problems in a myriad of industries
- The twin-set covers not only conventional-sized cooling systems but also include a detailed focus on two-phase heat transfer and flow in microchannels, micro-evaporators, etc.

INTERNATIONAL JOURNAL OF HIGH SPEED ELECTRONICS AND SYSTEMS (IJHSES)

<http://www.worldscientific.com/ijhses>

Editor-in-Chief: Michael S Shur (*Rensselaer Polytechnic Institute*)

About IJHSES: Aims & Scope

Launched in 1990, the International Journal of High Speed Electronics and Systems (IJHSES) has served graduate students and those in R&D, managerial and marketing positions by giving state-of-the-art data, and the latest research trends. Its main charter is to promote engineering education by advancing interdisciplinary science between electronics and systems in the light of high speed technology development.

ADVANCES IN DATA SCIENCE AND ADAPTIVE ANALYSIS (ADSAA)

<http://www.worldscientific.com/adsaa>

Editor-in-Chief: Samuel S.P. Shen (*San Diego State University*)

About ADSAA: Aims & Scope

Advances in Data Science and Adaptive Analysis (ADSAA) is an interdisciplinary journal dedicated to report original research results on data analysis methodology developments and their applications, with a special emphasis on the adaptive approaches. The mission of the journal is to elevate data analysis from the routine data processing by traditional tools to a new scientific level, which encourages innovative methods development for data science and its scientific research and engineering applications.

ENCYCLOPEDIA WITH SEMANTIC COMPUTING (ESC)

<http://www.worldscientific.com/esc>

Editor-in-Chief: Phillip C-Y Sheu (*University of California, Irvine, USA*)

About ESC: Aims & Scope

While the current society is information centric, the future will be knowledge centric. The challenge is how to structure, deliver, share and make use of the large amounts of knowledge effectively and productively. On the other hand, given the dynamic nature of semantic web, new information, and hence, knowledge are constantly evolving, as a result, the concept of this encyclopedia will inadvertently need to evolve to keep pace with the development and revised to meet the challenge. The Encyclopedia with Semantic Computing (ESC) incorporates the recent technological advances in semantic computing (based on meaning, context and intention) which aims to develop a new model of encyclopedia that delivers quality and dynamic knowledge to both professionals and laymen.

ESC will be published in multiple volumes on multiple subjects, both online and off-line. The first volume of ESC is on IT - Semantic Computing.

INTERNATIONAL JOURNAL OF AIR-CONDITIONING AND REFRIGERATION (IJACR)

<http://www.worldscientific.com/ijacr>

About IJACR: Aims & Scope

As the only international journal in the field of air-conditioning and refrigeration in Asia, IJACR reports researches on the equipments for controlling indoor environment and cooling/refrigeration. It includes broad range of applications and underlying theories including fluid dynamics, thermodynamics, heat transfer, and nano/bio-related technologies. In addition, it covers future energy technologies, such as fuel cell, wind turbine, solar cell/heat, geothermal energy and etc.

Hojjat Adeli Award for Outstanding Contributions in Neural Systems

To honor the extraordinary leadership and impactful and inventive research contributions of the Editor-in-Chief of IJNS, World Scientific established the *Hojjat Adeli Award for Outstanding Contributions in Neural Systems* in 2011 with a cash prize of \$500 to be given annually to the author(s) of the best paper published in the previous volume year. The recipient of the award is selected by the Editor-in-Chief in consultation with members of the Editorial Advisory Board and is announced in the August issue of the journal.

Hojjat Adeli is Professor of Biomedical Engineering, Biomedical Informatics, Neuroscience, Neurology, Electrical and Computer Engineering, and Civil, Environmental, and Geodetic Engineering at The Ohio State University. He has authored over 540 scientific publications including 15 books since he received his Ph.D. from Stanford University in 1976 at the age of 26. His penetrating research has appeared in over 100 journals. He has presented Keynote/Plenary Lectures at 101 research conferences held in 43 different countries. In 1998 he received the University Distinguished Scholar Award from The Ohio State University "in recognition of extraordinary accomplishment in research and scholarship". He is the quadruple-winner of the OSU College of Engineering Lumley Outstanding Research Award. In 2007 he received the Peter L. and Clara M. Scott Award for Excellence in Engineering and Charles E. MacQuigg Outstanding Teaching Award from OSU.

Among his numerous awards include a Special Medal in Recognition of Outstanding Contribution to the Development of Computational Intelligence from The Polish Neural Network Society, Eduardo Renato Caianiello Award for Excellence in Scientific Research from Italian Society of Neural Networks, an Honorary Doctorate from Vilnius Gediminas Technical University, Lithuania, and membership in the Spanish Royal Academy of Engineering. He is a Thomson Reuters **Highly Cited Researcher** in two categories of **Engineering** and **Computer Science**. In 2010, he was profiled as **Engineering Legend** in ASCE journal of Leadership and Management in Engineering. He is a Distinguished Member of ASCE, and a Fellow of AAAS, IEEE, AIMBE, and the American Neurological Association.

Now publishes 8 issues per year!

"...The range is broad, covering mathematical, biological and engineering interests. Duplication with the content of other journals is low and editorial filtering has kept the quality of the papers high."

Aims and Scope

This journal covers all subjects on the mind and body of humanoid robots. It is dedicated to advancing new theories, new techniques, and new implementations contributing to the successful achievement of future robots which not only imitate human beings, but also serve human beings. While IJHR encourages the contribution of original papers which are solidly grounded on proven theories or experimental procedures, the journal also encourages the contribution of innovative papers which venture into the new, frontier areas in robotics. Such papers need not necessarily demonstrate, in the early stages of research and development, the full potential of new findings on a physical or virtual robot.

General

MODERN DIGITAL TECHNOLOGY

From Ideas to Devices

by **Allen Klinger** (UCLA)**Key Features:**

- No mention of Pythagorean or descriptive mathematical terms like numerator and denominator
- Capable of forming a basis for discussions between children and parents
- Opens technology and issues behind its evolution to multiple generations

Readership: General; High-School level and above. People interested in understanding modern digital technology and how they came to be.

ELECTRICAL MACHINE THEORY THROUGH FINITE ELEMENT ANALYSISby **A Monti** (Politecnico di Milano, Italy), **F Ponci** (Politecnico di Milano, Italy) & **M Riva** (Università degli Studi di Milano, Italy)

This book puts forward an approach to the theory of electrical machines by means of finite element analysis. The basic idea is to provide the student with a wide set of solved problems in order to obtain a more "visual" approach to the magnetic field. The basic machine structures are discussed and comparisons with analytic solutions are made.

Readership: Undergraduates, graduate students, researchers and lecturers in electrical and electronic engineering.

Materials and Energy - Vol 6 **HANDBOOK OF SOLID STATE BATTERIES** **(2nd Edition)**

edited by **Nancy J Dudney**
(Oak Ridge National Laboratory, USA),
William C West (Nagoya University,
Japan) & **Jagjit Nanda** (Oak Ridge
National Laboratory, USA)

This comprehensive handbook covers a wide range of topics related to solid-state batteries, including advanced enabling characterization techniques, fundamentals of solid-state systems, novel solid electrolyte systems, interfaces, cell-level studies, and three-dimensional architectures. It is directed at physicists, chemists, materials scientists, electrochemists, electrical engineers, battery technologists, and evaluators of present and future generations of power sources.

Readership: Scientists, technologists, and students in the fields of electrochemistry, condensed matter physics, chemistry, and materials science.

THE GRANT WRITER'S HANDBOOK

How to Write a Research Proposal and Succeed
by **Gerard M Crawley** (University of South Carolina, USA) & **Eoin O'Sullivan** (University of Cambridge, UK)

Provides practical advice on writing a research grant proposal and includes many key comments from experienced researchers and reviewers. Authors have extensive experience in a number of countries with reviewing proposals from local scientists. Book covers all aspects of writing and managing a grant with examples drawn from a variety of countries

Readership: Graduate students and researchers looking to obtain and manage research grants.

DIFFERENTIAL EQUATIONS AS MODELS IN SCIENCE AND ENGINEERING

by **Gregory Baker**
(The Ohio State University, USA)

This textbook is unique in its approach to present mathematics within the context of science and engineering. It shows students why mathematics is powerful. It emphasizes mathematical understanding as the important approach to the construction of solutions. It provides students the opportunity to see just how mathematics is a natural part of science and engineering.

Readership: Undergraduates in science and engineering studying differential equations.

THE MATHEMATICS THAT POWER OUR WORLD

How Is It Made?

by **Joseph Khoury & Gilles Lamothe**
(University of Ottawa, Canada)

The book strikes a delicate balance between relevant common applications and a reasonable dose of mathematics. The mathematical proofs included are written in a way to assist students make a transition to higher level courses where tedious and detailed proofs are required. Chapters are made as independent as possible to give the reader the flexibility to start at any point of the book.

Readership: Advanced high school students, undergraduates and teachers interested in the mathematics that drive many modern technologies.

by **James K Freericks** (Georgetown University, USA)

2nd Edition

Novel and modern development of the many-body theory for Green's functions that emphasizes exact and numerical methods rather than perturbation theory. Comprehensive treatment of dynamical mean-field theory in the bulk and for inhomogeneous systems (including nonequilibrium extensions) and is easily accessible to second-year graduate students

Readership: Graduate students of solid state physics and quantum mechanics, researchers and electrical engineers.

430pp	May 2016	
978-1-78326-857-3	US\$118	£85
978-1-78326-858-0(ebook)	US\$153	£111

A MODERN COURSE IN UNIVERSITY PHYSICS

by **Fuxiang Han** (Dalian University of Technology, China)

The book is calculus-based. Calculus is intensively used in the elucidation of physics concepts and ideas. Materials are updated to the present-day frontiers of science and technology wherever possible. The reader can get to know how the fundamental physics principles are being utilized in current science and technology

Readership: Undergraduate students in science/engineering field and physics lecturers.

600pp	Dec 2016	
978-981-4596-96-1	US\$148	£98
978-981-4596-97-8(pbk)	US\$78	£51
978-981-4596-98-5(ebook)	US\$192	£127

PROBLEMS AND SOLUTIONS IN UNIVERSITY PHYSICS

by **Fuxiang Han** (Dalian University of Technology, China)

A detailed solution is provided to every problem. For a problem that is not straightforward, the underlying physics principle(s) and idea(s) will be spelled out very clearly. Useful problem-solving techniques are developed in some problems. Basic numerical techniques can be learned and practiced in some problems

Readership: Undergraduate students in science/engineering field and physics lecturers.

500pp	Dec 2016	
978-981-4602-03-7(pbk)	US\$58	£38

Journal of Medical Robotics Research

NEW

<http://www.worldscientific.com/ijmrr>

Editor-in-Chief: **Jaydev P. Desai** (*Georgia Tech.*)

Medical robotics has been progressively revolutionizing treatment for at least the past two decades. The Journal of Medical Robotics Research invites fundamental contributions to all areas of medical robotics including clinical evaluation studies. The journal is primarily aimed towards bringing the scientific and technological developments as well as clinical evaluation studies in the area of medical robotics to a wider robotics and clinical audience.

Aims and Scope

The Journal of Medical Robotics Research invites fundamental scientific and technological contributions as well as clinical evaluation studies in several areas, including, but not limited to:

- Robot-assisted Surgery
- Image-guided Interventions
- Rehabilitation Robotics
- Assistive Robotics
- Surgical simulation
- Image-guided Diagnosis and Therapy
- Nano-scale and micro-scale Interventions
- Telesurgery
- Haptics for Medical Robotics
- Smart instrumented tools for surgery
- Surgical Navigation
- Surgical Workflow
- Wearable Rehabilitation Systems

JOURNAL OF CIRCUITS, SYSTEMS, AND COMPUTERS (JCSC)

<http://www.worldscinet.com/jcsc>

Editor-in-Chief: **Wai-Kai Chen** (*Univ. of Illinois*)

Journal of Circuits, Systems and Computers is published eight times a year, and covers a wide scope, ranging from mathematical foundations to practical engineering design in the general areas of circuits, systems, and computers. Although primary emphasis will be on research papers, survey, expository and tutorial papers are also welcome. The journal consists of two sections:

Abstracting/Indexing: CNKI | Compendex | Computer Abstracts | Current Contents®/Engineering, Computing & Technology | DBLP Computer Science Bibliography | Ebsco Discovery Service | ExLibris Primo Central | Google Scholar | INSPEC | io-port.net | ISI Alerting Services | Mathematical Reviews | OCLC WorldCat | Proquest Summon | SciSearch® | Scopus

INTERNATIONAL JOURNAL OF MODELING, SIMULATION, AND SCIENTIFIC COMPUTING (IJMSSC)

<http://www.worldscientific.com/ijmssc>

About IJMSSC: Aims & Scope

This is a quarterly journal which deals with the fields of system modeling, simulation and scientific computing. The scope of the journal covers, but is not limited to:

- Modeling theory and methodology for complex systems, system simulation theory and methodology
- Complex applications of high level simulation languages, Multi-parameter Optimization in simulation
- Verification, validation and accreditation of theory and technology
- Finite element methods, finite difference methods, Approximation theory
- Distributed/High-Performance/Pervasive/Grid/Cloud Computing, Bioinformatics/Data-Mining, High Performance simulation technology
- Computational electromagnetics, electrodynamics, fluid dynamics, computational heat, mass, and momentum transfer
- M&S technology of continuous systems/discrete systems/hybrid systems/ Intelligent systems, complex systems/open systems/huge systems
- SBA/virtual prototyping engineering technology
- Simulation language methodology, supporting platforms, application techniques

Abstracting/Indexing: Compendex | Ebsco Discovery Service | ExLibris Primo Central | Google Scholar | OCLC WorldCat® | Proquest Summon | Scopus

- >> 11 diverse subject packages

Discover the most
flexible e-book offer
on the market

World Scientific E-Books

www.worldscientific.com

Main Features

- > Perpetual access model
- > No minimum purchase required
- > DRM-free content
- > 24 x 7 access for unlimited concurrent users
- > Over 5,000 titles available
- > Full support for mobile devices*
* With internet connection and Adobe acrobat

Pick and Choose

- > Build a customized collection

Subject Collections

- > Choose from 11 diverse subjects

Full Collections

- > Select from a deep back-list, or pre-order the front-list collection

In addition, you will enjoy

- > Fully integrated platform to search across e-journals, e-archives and e-books
- > MARC records for easy integration to your OPAC
- > Counter-compliant usage statistics
- > No hosting fees

How to Order

For more information, to request a quote or to request an institutional trial, please contact your regular supplier, or one of our local offices:

ASIA PACIFIC: sales@wspc.com.sg

NORTH, SOUTH AND CENTRAL AMERICA: sales@wspc.com

EUROPE, MIDDLE EAST AND AFRICA: sales@wspc.co.uk

For prices and title listing, please refer to
<http://www.worldscientific.com/sda/1071/librarians-ebooks-US.xls>

ORDER FORM

Please complete the form and send it to any of our offices below or order online @ www.worldscientific.com. Alternatively, you can send your order directly to your regular book supplier.

NORTH & SOUTH AMERICA

World Scientific Publishing Co. Inc.
27 Warren Street, Suite 401-402
Hackensack, NJ 07601, USA
Fax: 1-201-487-9656
